Key Insights

Insight 1 — Young and Elderly Customers Convert Best

Customers under 25 (73.4%) and over 65 (80.2%) have the highest subscription rates. Middle-aged customers (35–54) are the hardest to convert at around 41%. The bank should segment campaigns accordingly rather than targeting all ages equally.

Insight 2 — Previous Campaign Success is the Strongest Predictor

Customers who subscribed in a previous campaign convert at **91.3%** — nearly guaranteed. This group should be the absolute first priority for every future campaign. Customers with unknown history convert at only 40.7%.

Insight 3 — March, September, October, and December Are the Best Months

These four months deliver conversion rates above 82%. May is the worst month at just 32.8% despite likely receiving the most campaign calls. The bank is wasting resources running heavy campaigns in low-conversion months.

Insight 4 — Call Duration is a Strong Conversion Indicator

Subscribers stay on calls for an average of 537 seconds (9 minutes) compared to 223 seconds (3.7 minutes) for non-subscribers. Longer conversations lead to more subscriptions — agent training should focus on extending engagement and building rapport rather than rushing calls.

Insight 5 — Customers With Debt Are Hard to Convert

Customers with a housing loan convert at only 36.6% and those with personal loans at 33.2%. Customers with no loan obligations convert at 57.0%. Debt burden significantly reduces willingness to commit additional funds to a term deposit.

Insight 6 — Cellular Contact Outperforms All Other Methods

Cellular contact delivers a 54.3% conversion rate vs only 22.6% for customers with unknown contact methods. Getting a valid phone number before calling is critical.

Insight 7 — Students and Retired Customers Are Undervalued Segments

Students convert at 74.7% and retired customers at 66.3% — both significantly above average. Yet management (50.7%) and blue-collar workers (36.4%) likely receive more campaign attention due to their larger numbers.

Business Recommendations

1. Prioritise Previously Successful Customers First

Build a dedicated re-engagement list of customers who subscribed in previous campaigns. With a 91.3% conversion rate, this group requires minimal effort for maximum return. Make them the first call in every campaign cycle.

2. Shift Campaign Timing to High-Conversion Months

Concentrate campaign budgets in March, September, October, and December — all delivering 82%+ conversion rates. Reduce campaign intensity in May (32.8%) and January (41.3%) to save costs and agent time.

3. Target Students and Retired Customers More Aggressively

These two segments are dramatically underserved relative to their conversion potential. Design tailored messaging for students (flexibility, low minimum) and retirees (security, stable returns) and allocate specific campaign resources to them.

4. Train Agents to Extend Call Duration

Since longer calls strongly correlate with subscription, invest in agent training focused on relationship building, needs discovery, and product explanation rather than quick scripted pitches. Set a minimum call engagement target of 5–7 minutes for warm prospects.

5. Avoid Customers With Multiple Debt Obligations

Customers with both housing and personal loans convert at very low rates. Filter these profiles into lower-priority segments and reallocate those campaign resources to debt-free customers who convert at 57%.

6. Validate Contact Information Before Campaigning

Customers with unknown contact method convert at only 22.6% — the lowest of any group. Invest in CRM data hygiene to ensure valid cellular numbers are obtained and recorded before campaigns launch.
